

# **Equipment we recommend that you need**

1. A computer with internet
2. Printer (laser)
3. Scanner

## **Printer and scanners**

If you do not have access to a printer and scanner, we recommend that you invest in one.

We highly recommend that you buy a laser toner printer that comes with a scanner. The combo: scanner, printer are the best. The laser toner quality is far more superior to the ink. (Don't believe the salesman)

The toner will work even after 5 years but an ink cartridge will either doesn't work or become messy after 6 months.

When you buy a printer with a scanner, do not look for the cheapest as often, the toner is more expensive than the machines. Check the page yield per cartridge and work out if it is good value for money.

Our subjective recommendations, in order, are:

### **Highly recommended**

1. HP
2. Xerox
3. Lexmark

### **Recommended**

1. Cannon
2. Samsung
3. Dell

Other models: not recommended

Some places where you can buy:

Harvey Norman, The Good Guys, JB Hi Fi, Bing Lee, Office Works, Harris Technology, Dicksmith Electronics, your local computer stores just to name a few.
